Election/Restrictions

Page 2

1. Applicant's election with traverse of Group I, claims 1, 2, and 4-8 in the reply filed on 06/18/2007 is acknowledged. The traversal is on the ground(s) that the examiner fails to make a proper showing that claim 1 is anticipated or obvious over JP 03-065579. This is not found persuasive because the claimed subject matter is actually disclosed in the JP'579 reference (see rejections below).

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1, 2, and 4-6 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over JP 03-065579. JP'579 discloses a porous ceramic membrane comprising a calcium phosphate substrate having fine pores and a calcium phosphate coating on the substrate (pages 4 and

7). The coating contains 0.1 to 10% by weight of calcium phosphate having a

Art Unit: 1771

particle size of 100 nm or less and Ca/P ratio of 1.5 to 1.666. The calcium phosphate particles of the coating have the rod-like shape and dimensions within the range disclosed in the specification of the present invention (page 9). The coating has an average thickness of 2 μm, which is within the claimed range (page 10). The porous ceramic membrane has pores with an average pore diameter ranging from 200 to 500 nm (page 10), which reads on Applicants' an average diameter of the openings. The porous membrane is useful as an absorbent (page 11). Likewise, at least some of the pores of the coating are communicated with the pores of the substrate for successful absorption. It appears that JP'579 uses the same materials and the same technique to form the porous ceramic membrane as Applicants. The calcium phosphate slurry is applied to the porous calcium phosphate substrate. The slurry is then defoamed under reduced pressure and the coated substrate is fired at 700°C to 1400°C (pages 7 and 8). The slurry contains rod shaped calcium phosphate particles having the dimensions within the range disclosed in the present specification. Therefore, it is the examiner's position that the coating would be inherently formed on 5 to 100% of the wall surfaces of the fine pores of the porous substrate. Accordingly, JP'579 anticipates or strongly suggests the claimed subject matter.

5. Claims 7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 03-065579 as applied to claim 1 above, and further in view of JP 2003-073182.

JP'579 is silent as to the substrate having a porosity of 40 to 98%. JP'182, however, teaches a porous calcium phosphate substrate as a bone substitute material having

Art Unit: 1771

a porosity of 5 to 50% and a Ca/P ratio ranging from 1.5 to 1.7 (paragraphs 13 and 15). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use the porous calcium phosphate substrate having a porosity as taught by JP'182 motivated by the desire to porous ceramic membrane with sufficient strength. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the porous calcium phosphate substrate having a Ca/P ratio as taught by JP'182 motivated by the desire to produce the substrate having desired amount of hydroxyapatite having excellent biocompatility for use as a bone substitute material.

Double Patenting

6. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., In re Berg, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); In re Goodman, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); In re Longi, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); In re Van Ornum, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); In re Vogel, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and In re Thorington, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Art Unit: 1771

7. Claims 1, 2, and 4-6 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, and 3-5 of copending Application No. 10/996,434. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claims of the '434 application fully encompass the claimed subject matter.

This is a <u>provisional</u> obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

8. Claims 7 and 8 are provisionally rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1, and 3-5 of copending Application No. 10/996,434 in view of JP 2003-073182. The '434 application is silent as to the support portion having a porosity of 40 to 98%. JP'182, however, teaches a porous calcium phosphate substrate for bone supplementation, catalyst support, having a porosity of 5 to 50% and a Ca/P ratio ranging from 1.5 to 1.7 (paragraphs 13 and 15). Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use the support portion having a porosity as taught by JP'182 motivated by the desire to porous ceramic material with sufficient strength. It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the support portion having a Ca/P ratio as taught by JP'182 motivated by the desire to produce the support portion having desired amount of hydroxyapatite having excellent biocompatility for use as a bone substitute material.

This is a <u>provisional</u> obviousness-type double patenting rejection.

Contact Information

Page 6

9. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Hai Vo whose telephone number is (571) 272-1485.

The examiner can normally be reached on Monday through Thursday, from 9:00 to

6:00.

If attempts to reach the examiner by telephone are unsuccessful, the

examiner's supervisor, Terrel Morris can be reached on (571) 272-1478.. The fax

phone number for the organization where this application or proceeding is assigned

is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR

only. For more information about the PAIR system, see http://pair-direct.uspto.gov.

Should you have questions on access to the Private PAIR system, contact the

Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like

assistance from a USPTO Customer Service Representative or access to the

automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-

272-1000.
